

iRestaurant *Simplifying Restaurant Business*

Software

From the table layout screen that shows the current status of every table to other activities performed in house, the iRestaurant module puts your business at your fingertips and makes it easy, too.

Whether you're printing individual or combined checks, modifying orders or transferring tables or items, training time (and costs!) for your wait-staff and captains will be cut in half. You can use it with mouse or use it with keyboard only (gives you better functionality than a cash register).

iRestaurant comes to you as ready to use software for F&B businesses. It uses the robust & powerful Inventory Structure. It has very easy to use POS as per today's modern restaurant. It can be configured for Fine Dining Restaurants, Bars & Lounges, Discos & Nightclubs, Home Delivery, Quick Service / Fast Food and Cafeterias.

- KOT Generation
- Recipe Management
- Stock management linked with recipe
